

# Your Guide to Watering Wisely

Give your Tree a Good Watering As Soon as It's Planted!

**Adjust for Conditions:** Increase watering in hot, dry weather. Reduce during rainy periods. Adjust for specific tree needs and ensure good drainage.

## **Consistent Schedule:**

**First week:** Every other day.

**Next two months:** Every 2-3 days.

**After:** Weekly or bi-weekly for a year to establish roots.

**Water Slowly:** Use a soaker hose, drip irrigation, or TreeGator bag for slow, even water distribution deep into soil.

**Mulching:** Apply 2-3 inches of mulch, keeping it away from the trunk of the tree but covering the newly planted hole.
